# SOL Everyday Bottle — Product Guide

SOL is a two-person studio in Seoul making plain, well-built things for daily life. The Everyday Bottle is our first product.

## Temperature

The double-wall vacuum body keeps drinks cold for up to 24 hours and hot for up to 12 hours. We measured this at a room temperature of 22°C with the lid closed and the bottle filled to the top. Results will be shorter if the bottle is opened often or left in direct sun.

## Materials

The body is made of 18/8 stainless steel. The lid is made of BPA-free polypropylene with a silicone seal. There is no plastic in contact with the drink except the inside of the lid.

## Size

The bottle holds 500 ml and weighs 310 g empty. It fits most car cup holders and the side pocket of a standard backpack.

## Care

Hand wash the body with warm water and mild soap. The lid is top-rack dishwasher safe. Do not put the body in the dishwasher, freezer or microwave, because heat and cold can damage the vacuum seal.

## What testers said

We gave 40 bottles to office workers in Seoul for two weeks before launch. One tester wrote: "I finally drink water at my desk because it is still cold at 4 pm."

## Price and warranty

The Everyday Bottle costs 32,000 won and comes in sage, sand and charcoal. Every bottle has a two-year warranty against defects in the vacuum seal.

## Where to buy

Order online at sol-studio.example or visit our pop-up at Seongsu-dong on weekends in November.
